### Rollout to assist Queensland cancer patients

A new \$3.5 million Pharmacy Oncology Information Management Solution is to be introduced at Princess Alexandra, Gold Coast, Royal Children's and the Royal Brisbane and Women's hospitals, improving treatment for up to 1500 Queensland cancer patients each year. The rollout of the new software will be carried out by **Charm Health** over the next six to twelve months. The new software will enhance cancer data collection, provide more meaningful clinical information and reduce chemotherapy and clinical decision errors.
